

KETO FAMILY

Blue becomes black

Due to a change in material, the front panel of the KETO series is now being produced in Germany and delivered in black instead of blue. Orders already placed will still be delivered in blue when possible.

Technologically/qualitatively this change has no influence on performance.

KETO disconnectors can be combined regardless of the size. Different dimensions are adjusted to a uniform cover cut-out with the available components for touch protection. Many functions are integrated across all construction sizes, e.g. four cover support levels at 32, 60, 70 and 90mm above top of busbar. This ensures an optimal system integration. Version for baseplate mounting, busbar and DIN rail mounting offer the suitable solutions for each application.

ADVANTAGES:

- Increase short circuit strength and switching capability
- Improved touch protection and operator safety
- Easier assembly within restricted dimensional envelopes
- Enhanced flexibility and modularity with ability to work in combination with other devices
- High system integration
- One system, four sizes, full safety
- Always the right system for your application
- Uniform cover cutout for all sizes
- Easy changing of cable terminal from bottom to topside
- Reversible adaption to 5mm or 10mm thick busbar
- A full and comprehensive range of termination and indication accessories and options
- Sliding window openings in the handle offer convenient access for the voltage tester. This contributing to the protection level.
